QUICK GROWING GUIDE

Chili Starter Guide

by Fatalii.net

Start your exciting new journey: from selecting premium chili seeds at fataliiseeds.net to savoring your successful harvest.

This concise guide gives you the essential steps and points you to more comprehensive resources on our site for a detailed understanding.

> **Note:** for germination tips, check out our in-depth guide at fatalii.net/germinating.

1. Nurturing Your Seedlings
2. Transplanting
3. Outdoor Transition
4. Ongoing Care
5. Harvesting

STEP 1

Nurturing Your Seedlings

After your seeds have sprouted, the right care is crucial for your young plants.

LIGHT

Make sure your seedlings get plenty of light.

If sunlight is limited, consider supplemental grow lights. LED lights are excellent these days and very affordable. They don't have to be super strong for young plants.

WATERING

Keep the soil moist. To avoid overwatering, you can use a spray bottle, for example.

FEEDING

Start feeding with a half-strength liquid fertilizer every two weeks. We recommend our range of fertilizers, designed specifically for chili plants, at fatalii.net/ff.

They cater to the nutritional needs of chili plants and support them through each growth phase.

STEP 2

Transplanting: Providing Space to Grow

As seedlings develop 2–3 true leaves, they need more space.

POT SIZE

Move up to larger pots, eventually using a 10–20 L pot for mature plants. Smaller plants, or plants with smaller fruits, can also grow well in smaller pots.

> **Tip:** try clicking the pot size icons on the fataliiseeds.net product pages.

SOIL

Use well-draining soil, enriched with our slow-release (EasySlo) fertilizers for optimal growth. They are available at fatalii.net/ff.

We use growing peat, as it's rather cheap and works great for growing chilis.

STEP 3

Outdoor Transition: Acclimating Your Plants

If you're moving your plants outdoors, they need to adjust gradually.

HARDENING OFF

Introduce your plants to the outdoors gradually over a week.

> **An easier solution:** use netting or lace cloth to partially shade the plants.

LOCATION

Choose a sunny spot with protection from strong winds.

For guidance on outdoor planting and care, see our growing guides at fatalii.net.

STEP 4

Ongoing Care: Watering, Feeding and Support

Continued care is essential for a bountiful harvest.

WATERING

Water deeply at the base of the plant to encourage root development.

FEEDING

Keep using our fertilizers according to their instructions. For specific recommendations, visit fatalii.net/ff.

SUPPORT

Use stakes, string or cages to support your growing plants.

THE FINAL STEPS

STEP 5

Harvesting: The Reward

When the peppers are firm and vibrant, they’re ready to harvest.

Picking ripe peppers regularly encourages further fruiting.

Support and Community
